# How to Care for Your Flowers

Displaying your flowers: Place flower arrangement in a cool spot away from heating or a/c vents or drafts from doors or windows, out of direct sunlight and away from radiators, TVs and other heat-emitting electronics.

Caring for Your Arrangement: Every day, follow these steps:

Step 1: Check the water level of your flowers by placing a finger inside the container between the foam and the vase. Feel whether water is within an inch or so of the top of the vase.

Step 2: As needed, add water mixed with your packet of floral preservative to the vase. Mix the liquid carefully per the packet directions. Add plain water when you run out of flower food.

Step 3: Remove flowers as they yellow, wilt or fade.
